

Digitalization in the Danube Region

Conditions, Potential and Challenges in Politics, Economy and Society

Digitalization has entered all segments of people's lives so that daily routines have become unimaginable without digital technologies. Similar to global trends, the Danube Region as well faces new circumstances, chances and challenges, resulting from increasing computerization processes. This conference therefore discusses possibilities and perspectives relating to e-government and cyber-security, and questions the importance of education for digitalization and labour market needs.

Date: May 24, 2018
