Projects of the Lower Austrian Landscape Fund:

ERDKomm (Communication about soil) and BME (soil missionary earth colours)

Earth colours extracted directly from the soil - natural colour pigments as they have been used for thousands of years - can contribute to a deepening and improvement of soil awareness. From 2008 to 2014, more than 100,000 people, especially children and young people from Austria, the Czech Republic, Hungary and Slovakia worked with earth colours from Lower Austria, painted in creative competitions and at information stands and thus also found more connection to "their soil".

Excursion Multi-use hedge 21.6.2023

Hedges ensure that the fertile topsoil is protected from wind erosion and improve the microclimate. This is becoming increasingly important as adaptation to climate change. They provide habitats for insects, birds and mammals, thereby promoting biodiversity and beneficial insects.
